# TransPAC Acceptable Use Policy

The TransPAC project is a more than two decades-long collaboration in the Asia-Pacific region to improve networks in support of research and education, primarily funded by the US National Science Foundation. It supports not only transoceanic capacity but also provides services to advance large-scale international research efforts. It is a cooperative partnership with the Asia Pacific Advanced Network (APAN), the Trans-Eurasia Information Network (TEIN), and the Asia Pacific Oceanic Network (APOnet) collaboration.

TransPAC is a transit network and therefore has no end users directly connected. Access to TransPAC is via connected networks, peers, and partners. Data communication over the TransPAC network is governed by the acceptable use policies of the campus, service provider, or other end networks involved in the traffic. TransPAC will offer settlement free peering to any Research and Education entity who can acquire a cross connect to one of our points of presence. TransPAC will not peer with any purely commercial entity.
