NGUYEN KIM LOI, Ph.D.
Associate Professor
Director of Research Center for Climate Change
Head, Department of Applied Geomatics
Nong Lam University, Ho Chi Minh City
Vietnam

August 18, 2014 Hanoi, Vietnam

“Vietnam is believed to be one of the five most vulnerable countries in the world to the negative impacts of climate change.” (Climate Change and Human Development in Vietnam, Human Development Report Office, UNDP 2007/2008)

What is RCCC - NLU???

RESEARCH CENTER FOR CLIMATE CHANGE

NONG LAM UNIVERSITY – HOCHIMINH CITY

A faint, light-colored map of the United States serves as the background for the slide. The map shows the continental United States, Alaska, and Hawaii, with state boundaries and major geographical features like the Great Lakes and the Gulf of Mexico visible. The colors are muted, with greens for land and blues for water.

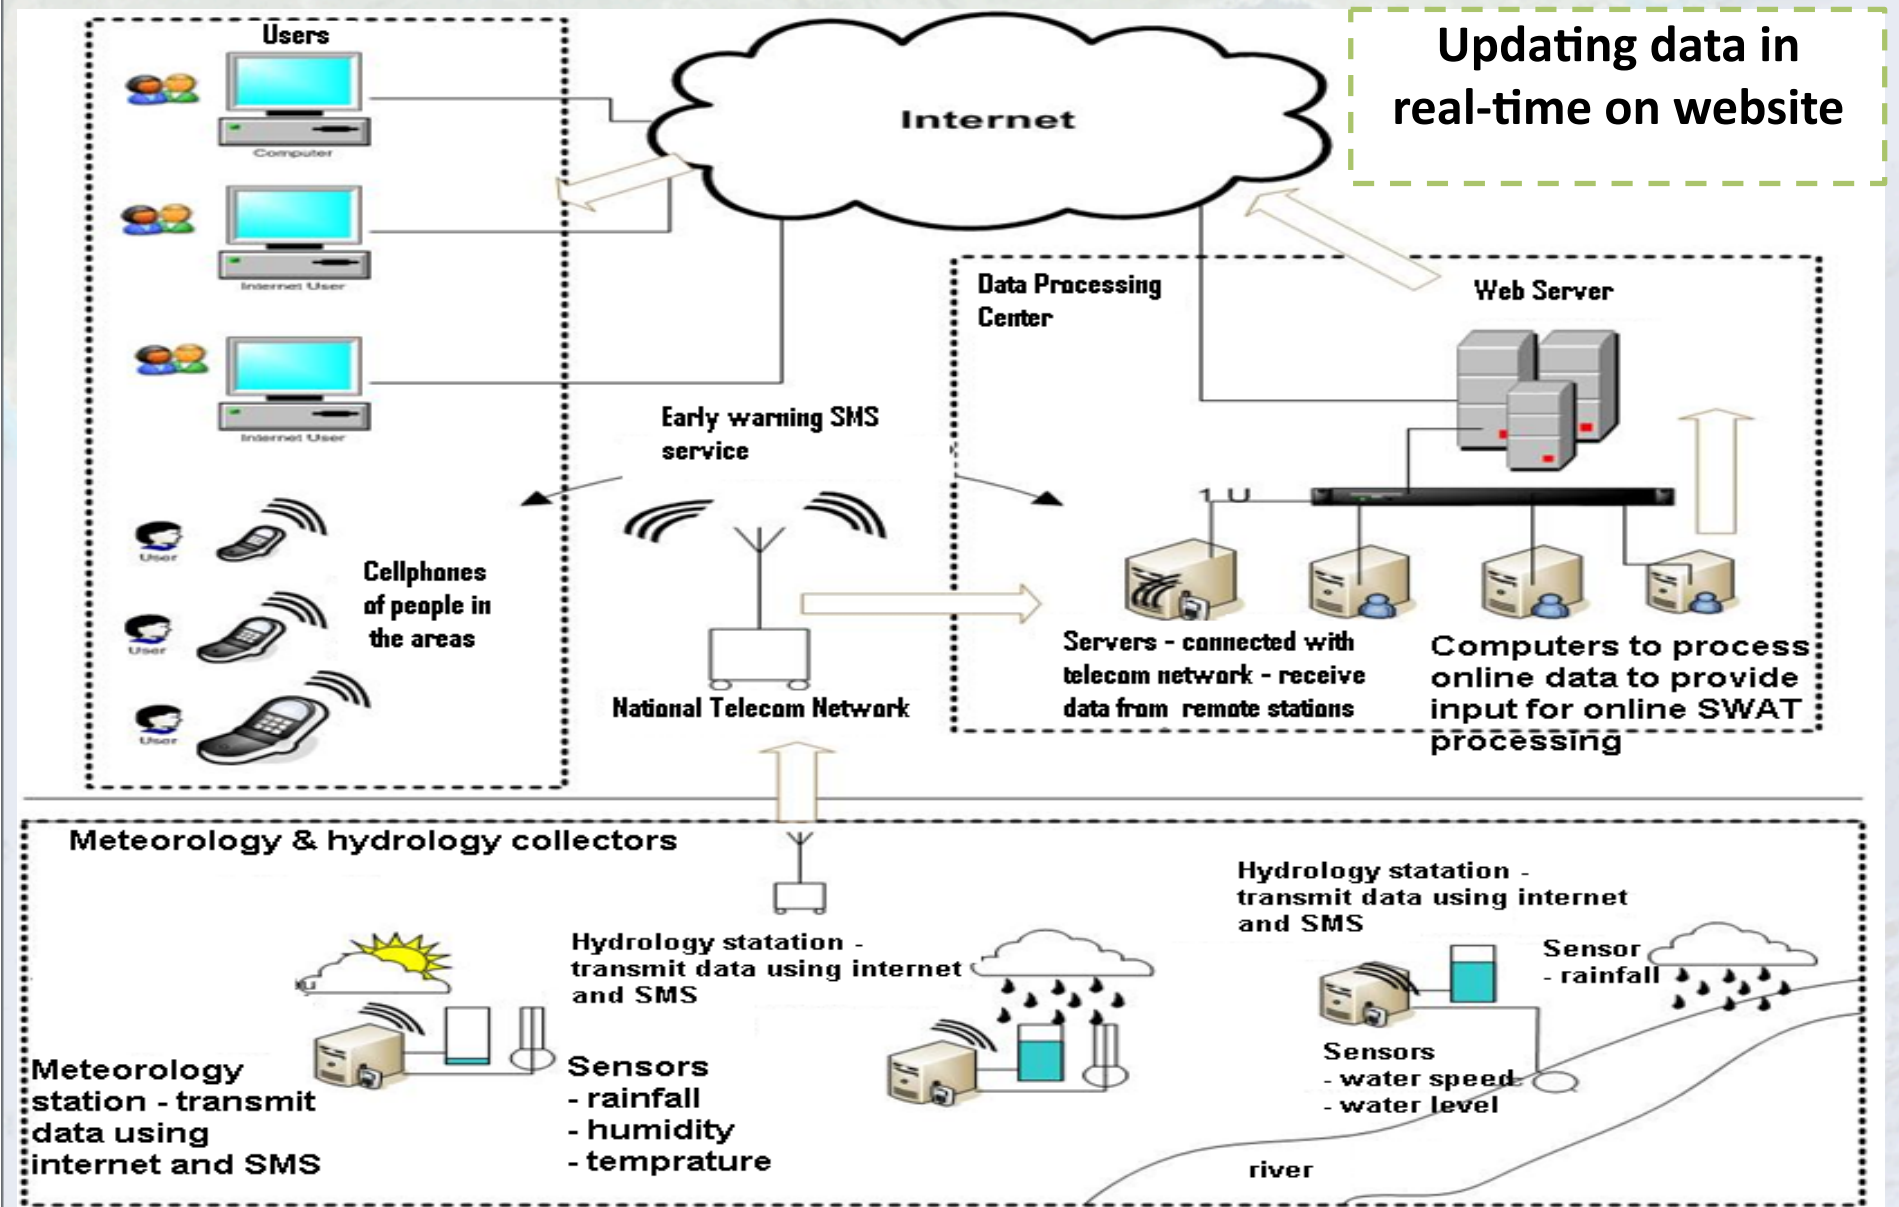

Research Fields

- Vulnerability Assessment
- Social Impact Assessment
- Coastal and Wetland Management
- Carbon Sequestration
- Clean Energy
- Ecosystem Services
- Alternative Adaptation to Climate Change

Projects

- Adaptation to Climate Change (2009)
- Land management (2009, 2010, 2011)
- Natural resources management (2013)
- Ecosystem Services (2013)
- Flood early warning system (2012, 2014)

Flood early warning system

Flood early warning system

- Policy
- Sharing data
- Equipments for studies

Directions for future researches

- Climate change adaptation and mitigation
- Natural resources management
- Land management
- Natural disasters prevention and management

A small, realistic-looking globe of the Earth is positioned on a single, vibrant green leaf. The globe shows blue oceans, white clouds, and green landmasses. The leaf has a prominent vein structure and a slightly serrated edge. The entire scene is set against a white background that is tilted slightly to the right. This white background is placed over a larger, textured background that resembles a map of the world in shades of light green and blue.

Thank you for your attention!
